

# ***Thug FindIR™***

Whether you are searching for a suspect on the run , trying to locate a child lost in the woods, or protect the lives of officers, the ***Thug FindIR™*** is a **must have tool**. The *Thug FindIR™* product is the ONLY product on the market which incorporates a true Forward Looking InfraRed Imager, a 540 Lines of Resolution Color Zoom CCD Camera with low light enhancement, InfraRed LED Illumination for the Hi-Resolution CCD Camera, and 1400 Lumens LED Flood Lamps with Strobe capability for confusing an attacker and audio/video recording. The *Thug FindIR™* incorporates all these tools and more into one portable device. The unit is about the size and weight of a cordless drill and comes with a long life rechargeable battery. The thermal imager can detect a heat source at nearly 1,500 feet and the full outline of a person at nearly 800 feet from the user, making open area searches both easier and safer. And building searches may never be the same. The unique design allows you to look around corners and into attic spaces without having to expose your head. The user no longer is forced to decide whether to bring his flashlight, his camera, or his Thermal Imager to a call or scene.

## **Additional FEATURES OF THE *Thug FindIR™*:**
